TS-SCI Clearance

Atlanta, GA | 843-323-7432 | wilmsas@me.com | [LinkedIn](#) | [wilmsas.com](#)

PROFESSIONAL SUMMARY

Principal Product Designer and UX Strategist with 8+ years designing mission-critical software used by thousands of service members and defense operators. Known for translating complex operational workflows into scalable digital systems that reduce manual workload and increase adoption. Experienced leading cross-functional teams, establishing UX research practices, and driving product strategy across engineering, data, and leadership stakeholders. TS-SCI cleared.

WORK EXPERIENCE

Senior UX Strategist

MetroStar | Atlanta, GA | Jan 2025 - Present

- Redesigned the Army recruiting territory management workflow, creating a GenAI-assisted automation pipeline that reduced a 30-day manual process to 8 hours.
- Architected a scalable data transformation workflow converting 80,000+ records into 4,000 deployment-ready files for Salesforce territory rule management.
- Established the program's first formal UX research practice including recruitment pipelines, consent frameworks, usability protocols, and synthesis standards.
- Research-driven design improvements increased user satisfaction by 43% among operational users.
- Designed a structured help desk intake and triage system replacing ad-hoc bug reporting with trackable workflows and transparent resolution tracking.
- Led UX strategy for a FinOps reporting platform, delivering interaction architecture and a design system used directly by engineering.

Lead Product Designer / Product Manager

Army Software Factory | Austin, TX & OCONUS | Sep 2020 - Mar 2025

- MySquad: Designed a mobile soldier counseling and accountability platform replacing paper DA-4856 workflows with QR-based co-signing. Scaled from 250 to 15,000+ users and showcased at AUSA 2021.
- Atlas: Led frontend and interaction design for a classified logistics visualization platform connecting U.S. and NATO supply systems. Prototypes served as the production specification.
- LOGTAK: Designed a TAK plug-in enabling squad-level logistics capture and aggregation through brigade command, informed by multi-echelon user research.
- Tesseract: Co-designed a secure internal development framework providing UX patterns and architecture standards, reducing new team time-to-production from weeks to days.
- Led design operations across product teams, mentoring designers, running critiques, and aligning UX practices with engineering workflows.
- Restructured discovery and design processes across teams, reducing discovery-to-MVP timelines from 5 months to approximately 4 weeks.

Signal Officer

U.S. Army, Cyber CDID | Fort Eisenhower, GA | Jan 2020 - Sep 2021

- Coordinated modernization technology showcases connecting development teams with senior Army leadership evaluating emerging operational capabilities.
